ABSTRACT OF THE DISCLOSURE

The doll history software is a computer program and system that implements a computerized method for interactive retail sale of a stuffed toy to a customer. The customer participates in interactive activities including inputting information relating to the stuffed toy, inputting the customer's personal identifying information, inputting information relating to a designated recipient for the stuffed toy. Additionally, the customer has her picture taken and interacts with a simulated handprint and footprint scanning operation that gives the effect that the hands and feet of the stuffed toy are being scanned for printing. A personalized memento is printed for the customer. The personalized memento may be in the form of a newspaper or newsletter front page bearing the photo of the customer, or of a birth certificate bearing hand and foot prints of the stuffed toy. Additionally, a memento in the form of a message medallion may be created.
